

G. R. LOKESH

DevOps Engineer | DevSecOps Engineer | Cloud Engineer | Platform Engineer | SRE

Hyderabad, India | 9100948285 | grlokesh96@gmail.com | <http://www.linkedin.com/in/grlokesh96> | Portfolio: <https://grlokesh.online>

PROFESSIONAL SUMMARY

DevOps and DevSecOps Engineer with 6+ years of experience designing, automating, securing, and operating **production-grade cloud infrastructure on AWS**. Expertise in **Amazon EKS, Kubernetes, Terraform, Docker, GitHub Actions, Argo CD, Linux, IaC, CI/CD, GitOps, and cloud security**. Experienced in building **scalable microservices platforms**, implementing DevSecOps security controls, automating infrastructure, and improving observability and reliability. Delivered measurable improvements including **45% faster releases, 80% faster infrastructure provisioning, 30% cloud cost optimization, and 99.9% production availability**.

TECHNICAL SKILLS

Cloud: AWS (EKS, EC2, S3, VPC, IAM, ALB, CloudWatch, EBS), Azure (Compute, Storage, Azure Monitor, RBAC, Backup)

CI/CD & GitOps: GitLab CI/CD, GitHub Actions, Argo CD, Git

Containers & Kubernetes: Docker, Kubernetes, Amazon EKS, Helm, Rancher, HPA, KEDA, Karpenter, Cluster Autoscaler

Infrastructure as Code: Terraform, Infracost, Ansible

DevSecOps: SAST, SCA, DAST, SonarQube, Semgrep, Trivy, Snyk, Gitleaks, Checkov, SBOM, Cosign, OIDC, Vault

Observability: Prometheus, Grafana, Datadog, ELK, CloudWatch, Alertmanager, Azure Monitor

Networking: AWS VPC, Application Load Balancer (ALB), Kyverno, Istio, Ingress

Automation & Scripting: Python, Bash, Shell Scripting, AWS CLI, AWS Lambda, Linux

Databases & Storage: PostgreSQL, MongoDB, Amazon DynamoDB, Redis, Amazon S3, EBS CSI, PV/PVC

PROFESSIONAL EXPERIENCE

DevSecOps Engineer — ASICS Technologies

Jul 2024 – Aug 2026

- Implemented **GitOps CI/CD** with **GitLab CI/CD, Argo CD, and AWS EKS** for **30+ microservices**, reducing release time by **45%**.
- Enforced **DevSecOps** pipelines integrating SAST, SCA, IaC, container, & DAST security controls with automated **security gates**.
- Developed modular **Terraform** infra and integrated **Infracost** for reusable deployments and proactive cost estimation.
- Managed **Amazon EKS clusters** supporting **30+ microservices**, ensuring scalable, reliable, and highly available deployments.
- Hardened Kubernetes security using **RBAC, IRSA, and HashiCorp Vault**, enforcing **least-privilege access** across EKS clusters.
- Optimized EKS autoscaling using **HPA, KEDA, Cluster Autoscaler, and Karpenter**, reducing compute costs by **30%**.
- Hardened Kubernetes security with **Kyverno** and implemented **Istio** service mesh for mTLS and traffic routing.
- Configured Kubernetes PVs, PVCs, and **EBS CSI** for persistent storage supporting **PostgreSQL, MongoDB** and **Redis** workloads.
- Implemented **Blue-Green & Canary deployments** in Kubernetes, reducing deployment risk and improving **release reliability**.
- Standardized **multi-cluster RBAC** and visibility with **Rancher**, improving cluster operations & reducing **troubleshooting time**.
- Engineered observability and centralized logging using **ELK Stack, Datadog, and Alertmanager** reducing **MTTR by 50%**.
- Developed Bash and Python automation scripts for AWS operations, reducing manual infrastructure tasks by **70%**.

DevOps Engineer — Larsen & Toubro Construction (L&T)

Sep 2021 – Jul 2024

- Managed **Git repositories** and branching strategies, streamlining pull requests and code integration for **CI/CD delivery**.
- Built and maintained CI/CD pipelines for **40+ microservices** using **GitHub Actions, & Argo CD**, improving release velocity.
- Integrated **DevSecOps security** into CI/CD pipelines using **SonarQube, Trivy, SAST, dependency, and container scanning**.
- Containerized** microservices with **Docker multi-stage builds**, reducing **image sizes by 60%** and improving **CI/CD efficiency**.
- Provisioned **AWS infrastructure** using Terraform across EC2, S3, VPC, and IAM, accelerating infrastructure delivery by **80%**.
- Deployed microservices on **Kubernetes** using Deployments, **StatefulSets, DaemonSets, CronJobs, and Services**.
- Created and maintained reusable **Helm charts, standardizing Kubernetes application deployments** across environments.
- Troubleshoot Kubernetes issues including **CrashLoopBackOff, ImagePullBackOff, & OOMKilled**, restoring **service availability**.
- Automated server configuration using **Ansible Playbooks** and Roles, reducing manual operational effort by **80%**.
- Monitored Kubernetes performance using **Prometheus and Grafana**, improving **observability** and incident detection.

- Provided **L1/L2 support** for **AWS and Azure cloud infrastructure**, troubleshooting production issues and service incidents.
- Troubleshot **Compute, Networking, Storage, Connectivity, and Performance issues** across **AWS and Azure** environments.
- Managed **IAM users, roles, permissions, MFA, Azure RBAC**, and access requests following **security best practices**.
- Performed **backup and recovery operations** using **EBS Snapshots**, S3, Azure Backup, and Recovery Services Vault.
- Automated operational tasks using **AWS Lambda**, Azure Automation, **Bash, Python**, and AWS/Azure CLI.
- Monitored infrastructure using **AWS CloudWatch** and Azure Monitor, investigating alerts, logs, and **performance metrics**.
- Reduced AWS and Azure cloud costs by **30%** through **right-sizing**, usage analysis, and automated shutdown.
- Maintained operational **runbooks** and troubleshooting guides, improving **incident resolution** and team knowledge sharing.

PROJECTS

Cloud-Native Trading & Portfolio Management Platform — DevSecOps & GitOps

Company: ASICS Technologies | **Client:** Webull

Objective: Built and operated a production-grade **DevSecOps platform on Amazon EKS**, automating secure GitOps delivery, Terraform-based infrastructure provisioning, Kubernetes operations, observability, and cloud optimization.

Key Technologies: AWS, EKS, Terraform, GitHub Actions, Argo CD, Docker, Helm, Gitleaks, Semgrep, SonarQube, Snyk, Trivy, Checkov, Syft, Cosign, ECR, JFrog, Vault, GitHub Actions OIDC / AWS IAM OIDC, Istio, Datadog.

Outcome: Automated secure delivery for **30+ microservices**, integrating DevSecOps **security, SBOM generation, container signing, artifact management, and GitOps deployment**, achieving **99.9% availability** and **zero-downtime releases** while reducing **critical vulnerabilities by 60%**.

Remote-Controlled Smart Devices — Cloud DevOps

Company: Larsen and Toubro (L&T) | **Client:** LNT Heavy Civil Division

Objective: Designed and implemented DevOps practices for **remote smart-device monitoring and control**, automating **CI/CD, Kubernetes deployments**, and AWS infrastructure across Dev, QA, and Production environments.

Key Technologies: AWS, Amazon EKS, Kubernetes, Docker, Terraform, Ansible, GitHub Actions, Argo CD, Helm, Prometheus, Grafana, CloudWatch, SonarQube, Trivy.

Outcome: Automated GitOps delivery for **40+ microservices**, standardized Helm deployments, and accelerated Terraform/Ansible provisioning, **reducing incidents by 45%, and infrastructure provisioning time by 80%**.

EDUCATION

Bachelor of Technology in Civil Engineering

Jan 2015 – Mar 2019

Annamacharya Institute of Technology and Science
